

Filter Replacement Maintenance & Capacity Insights Beyond O₂ Premium Alkaline Oxygen Filter Systems

Filtration maintenance of your Beyond O₂ Premium Alkaline Oxygen Filter System is simple and needs to be checked (on average, depending on usage) only once a year. Please note in reviewing the following replacement timetables and/or gallons used, these numbers assume reasonable, normal poor quality city, well, or rainwater. The only exception we have ever seen to this is the ever so rare occasion where water lines are compromised due to construction or water main breakage—in which cases it usually is required to replace the bottom 3 filters.

Annually, determining when your filters need replaced is simple and easy and is typically determined by one of the following symptoms or conditions:

1. Notable Loss of flow rate indicates one or all the bottom primary filters need to be replaced. This can range from 6 months to 1 year, depending on the quality of your source water.
2. Checking pH to see if Mineral Replacement is needed – We recommend you check this every 1-2 years. Beyond O₂ will notify you when it is time to consider sending in a water sample for a free check of your Alkaline Enrichment Performance. To send us a sample, simply place ½ cup of your Premium Alkaline water directly from the Special Spigot into a zip lock baggy. Double or triple the same zip lock bag in case of breakage and put into a regular stamped envelope.
3. The last two filters are usually replaced every 3rd year.

Approximate Filter Replacements:

		Approx. Gal.	Approx. Gal.	Approx. Time
Home System:	<u>Daily Cap.</u>	<u>Bottom 3 Filters</u>	<u>Pearl Replace</u>	<u>Special Membrane Filters</u>
	50 GPD*	350 Gallons	350 to 500 Gallons	Every 3 Years
Business System:	200 GPD	8,000 Gallons	10,000 Gallons	Every 3 Years

Pump - Passes wastewaters back through the system and are perfectly okay, simply like double washing your cloths, this assists in having about 80% less water waste. In some cases, a small clicking sound is heard.

* GPD = Gallons Per Day Capacity

Whole House Systems... Are Perhaps Something To Consider?

Beyond O₂ now offers you the option of optimizing your home's water experience by greatly enhancing the quality of your source water when it enters your home. As you can imagine, clean quality, toxin free water quality adds benefits when bathing (Softer skin and hair), laundering (Clothing care) and dish washing (Residue elimination)... and overall maintenance of your appliances, drinking water filtration, shower pipes and other pipe fixtures. For more information contact your Beyond O₂ representative or visit our website for more information.
