

Filter Replacement Maintenance & Capacity Insights Beyond O2 Premium Alkaline Oxygen Water Filtration Systems

Maintenance of your Beyond O2 Premium Alkaline Oxygen Water Filtration System is simple and needs to be checked (on average, depending on usage) only once a year. Please note in reviewing the following replacement timetables and/or gallons used, these numbers assume reasonable, normal city or rain water is being accessed. The only exception we have ever seen to this is the ever so rare occasion where water lines are compromised due to construction or water main breakage—in which cases it usually is required to replace sooner. Determining when your filters need replacing is simple and easy and is typically determined by one of the following symptoms or conditions:

- 1. Notable Loss of flow rate indicates one or all the bottom primary filters need to be replaced. This can range from 6 months to 1 year, depending on usage and the quality of your source water.*
- 2. Checking pH to see if Mineral Replacement is needed – We recommend you check this every 1-2 years. Beyond O2 will notify you when it's time to consider sending in a water sample for a free test of your Alkaline Enrichment Performance. To send us a sample, simply place ¼ cup of your Premium Alkaline water directly from the Special Spigot into a ziplock bag. Double or triple the same zip lock bag in case of breakage and put into a regular stamped envelope.*

Approximate Filter Replacements:

Approx. Gal. Approx. Gal. Approx. Time

Home System: Daily Cap. Bottom 3 Filters Mineral Replace Special Membrane Filters
50 GPD* 350 Gallons 350 to 500 Gallons Every 3 Years

Business System: 200 GPD 8,000 Gallons 10,000 Gallons Every 3 Years

Pump - Passes wastewaters back through the system and are perfectly okay, simply like double washing your cloths, this assists in having about 80% less water waste. In some cases, a small clicking sound is heard.

*** GPD = Gallons per Day Capacity**

Whole House Systems...Something to Consider?

Beyond O2 now offers you the option of optimizing your home's water experience by greatly enhancing the quality of your source water when it enters your home.

Imagine the benefits of high quality toxin free water for bathing (softer skin and hair), laundering (clothing care) and dish washing (residue elimination). This will improve the overall maintenance of your systems, appliances and plumbing fixtures. For more information visit our website.
